

Permanent Erosion Control

Learn How Flexamat® Is The Best Permanent Erosion Solution!

Flexamat® is a permanent erosion control mat utilized for stabilizing slopes, channels, low water crossings, inlet/outlet protection, and shorelines. It consists of concrete blocks (6.5" x 6.5" with a 2.25" profile) locked together and embedded into a high strength geogrid. There is 1.5" spacing between the blocks that gives the mat flexibility and allows for optional vegetation growth. The mat is packaged in rolls, making transporting and installing **Flexamat®** efficient.

Up to 4800 square feet of material can ship on one truckload.

- Maintenance – safe to mow over
- Stable footing for kayakers and canoers
- Native littorals and vegetation thrive within matting
- Enhances safety – eroded banks are hazardous
- Environmentally friendly – safe for wildlife to cross
- Locked in place – kids can't throw **Flexamat**® like they can with rocks
- Decrease trucks on road one truckload of **Flexamat**® covers 4800 square feet of surface area
- Will not attract snakes like rock rip rap

Ministry of HWY Dafoe, Saskatchewan

Flexamat® was initially developed to stop shoreline erosion. It permanently stops erosion, while aesthetically conforming to the landscape. **Flexamat**® stops erosion caused by waves, as well as erosion caused by the burrowing of nutria or muskrats. **Flexamat**® also prevents erosion caused by fish, such as Tiliapia.

Flexamat® enables easy maintainance of the shoreline. Commercial mowers may be used over **Flexamat**®. There is also the option to let native vegetation grow wild through the **Flexamat**®.

Flexamat® enhances safety of both the community and maintenance crews. Steep eroded banks are hazardous to maintain and it can be dangerous to even walk along the shoreline. **Flexamat**® provides a stable walking surface for canoers, kayakers, and other water enthusiasts.
